Assignment:

1. Declare a div() function with two parameters. Then call the function and pass two numbers and display their division.

```
def div(num1, num2):
  return num1//num2
div(10,2)
```

```
5
```

2. Declare a square() function with one parameter.Then call the function and pass one number and display the square of that number .

```
def square(x):
  return x*x
square(5)
```

```
25
```

3. Using max() and min() functions display the maximum and minimum of 5 random numbers.

```
print("Maximum number : ", max(10,39,45,54,34))
print("Minimum number : ", min(10,39,45,54,34))
```

```
Maximum number :  54
Minimum number :  10
```

4. Accept a name from the user and display that in lower case using lower() function

```
name = input("Enter user name :").lower()
print(name)
```

```
Enter user name :DFDS
dfds
```

Assignment:

1. Write a Python program to count the occurrences of each word in a given sentence string = “To change the overall look of your document. To change the look available in the gallery”

```
str = "To change the overall look of your document. To change the look availa
words = (str.lower()).split()
for s in words:
  print(f"{s} : {words.count(s)}")
```

```
to : 2
change : 2
the : 3
overall : 1
look : 2
of : 1
your : 1
document. : 1
to : 2
change : 2
the : 3
look : 2
available : 1
in : 1
the : 3
gallery : 1
```

2. Write a Python program to remove a newline in Python String = "\nBest \nDeeptech \nPython \nTraining\n"

```
str = "\nBest \nDeeptech \nPython \nTraining\n"
s = str.split("\n")
print(s)
```

```
['', 'Best ', 'Deeptech ', 'Python ', 'Training', '']
```

3. Write a Python program to reverse words in a string String = "Deeptech Python Training"

```
str = "Deeptech Python Training"
print(f"Reversed String : {str[::-1]}")
```

```
Reversed String : gniniarT nohtyP hcetpeeD
```

4. Write a Python program to count and display the vowels of a given text String="Welcome to python Training"

```
str = "Welcome to python Training"
count = 0
v = "aeiou"
for s in str:
  if s in v:
    count += 1
print("Count of vowels :", count)
```

```
Count of vowels : 8
```

Assignment:

1. Write a Python program to Count all letters, digits, and special symbols from the given string Input = “P@#yn26at^&i5ve” Output: Chars = 8 Digits = 2 Symbol = 3

```
str = "P@#yn26at^&i5ve"
digit = 0
char = 0
sym = 0
for s in str:
  if s.isdigit():
    digit += 1
  elif s.isalpha():
    char += 1
  elif not s.isalnum():
    sym += 1
print(f"Chars = {char}  Digits : {digit}  Symbol = {sym}")
```

```
Chars = 8  Digits : 3  Symbol = 4
```

2. Write a Python program to remove duplicate characters of a given string. Input = “String and String Function” Output: String and Function

```
str = "String and String Function"
words = (str.lower()).split()
unique = []
for w in words:
  if w not in unique:
    unique.append(w)
s = " ".join(unique)
print(s)
```

```
string and function
```

3. Write a Python program to count Uppercase, Lowercase, special character and numeric values in a given string

Input = “Hell0 W0rld ! 123 * # welcome to pYtHoN” Output: UpperCase : 5 LowerCase : 18 NumberCase : 5 SpecialCase : 11

```
from re import UNICODE
str = "Hell0 W0rld ! 123 * # welcome to pYtHoN"
uc = 0
lc = 0
nc = 0
sc = 0
for s in str:
  if s.isdigit():
    nc += 1
```

```
    elif not s.isalnum():
      sc += 1
    elif s.isupper():
      uc += 1
    elif s.islower():
      lc += 1
  print(f"UpperCase : {uc} LowerCase : {lc} NumberCase : {nc} SpecialCase : {sc
```

```
UpperCase : 5 LowerCase : 18 NumberCase : 5 SpecialCase : 11
```

4. Write a Python Count vowels in a string input= “Welcome to Python Assignment”
   Output: Total vowels are: 8

```
str = "Welcome to python Training"
count = 0
v = "aeiou"
for s in str:
  if s in v:
    count += 1
print("Count of vowels :", count)
```

```
Count of vowels : 8
```
