File Handling

```
#Write on file
file = open("data.txt","w")
file.write("Welcome to Python!")
file.close()
```

```
#Write on file
file = open("data.txt","a")
file.write("\nWelcome to Python!")
file.close()
```

```
#Read Content from file
file = open("data.txt", "r")
str = file.read()
file.close()
print(str)
```

```
Welcome to Python!
Welcome to Python!
```

```
# Q1 Write a program to append student details into a file without deleting th
file = open("data1.txt","w")
file.write("Welcome to Python!")
file.close()
file = open("data1.txt", "r")
str = file.read()
file.close()
print(str)
```

```
Welcome to Python!
```

```
# Q2 Write a program to append student details into a file without deleting th
file = open("data1.txt","a")
file.write("\nStudent Details:\nName: Rohan \nRollno. : 5")
file.close()
file = open("data1.txt", "r")
str = file.read()
file.close()
print(str)
```

```
Welcome to Python!
Student Details:
Name: Rohan
Rollno. : 5
```

```
# Q3. Write a program to read all the content of a file and count the number
file = open("data1.txt", "r")
#file.seek(0)  #not necessary
lines = file.readlines()
```

```
print(len(lines))
file.close()
```

```
4
```

```
# Q4 Write a program to handle the error when a file does not exist using exc
try:
  file = open("data2.txt", "r")
  str = file.read()
  print(str)
except FileNotFoundError:
  print("Error! File not found!")
```

```
Error! File not found!
```

```
# Q5 Explain the difference between write ("w") mode and append ("a") mode wi
file = open("data.txt","w")
file.write("Welcome to Python!")
file.close()
file = open("data.txt","a")
file.write("\nWelcome to Python!")
file.close()
```
